

## 13 — Component: .zone

### DEVICE REGION

**USE.** A named dashed region grouping elements: retained scope, error boundary, safe area, old way. Zones answer “where does this live?” — the fog genre’s best friend.

```
<div class="zone"><span class="zone-label">retained  
scope</span> ... </div>
```

### DEVICE · ZONE

createCounter() · outer function

#### RETAINED SCOPE

count = 0

return

count++

- ① **Note.** The label sits on the zone’s border, like a sign on a fence — the region reads as a place, not a rectangle.
